

MEDTECH CAREER MAP

7 MedTech roles a *pharma background* can move into.

What each role actually is — and how hard it is to break in. Ranked by honest entry difficulty.

And the 2 easiest aren't sales — they're the ones nobody mentions.

SWIPE TO SEE ALL 7 →

Medical Device Sales / Territory Manager

The company's face in hospitals — selling medical devices to surgeons, doctors and procurement teams across your assigned territory.

WHAT THE DAY-TO-DAY LOOKS LIKE

Visiting hospitals and operating theatres, demoing devices and supporting live cases, building doctor and KOL relationships, negotiating with procurement, and tracking your territory's pipeline against targets. Relationship-driven, field-heavy work.

ENTRY DIFFICULTY

No engineering degree

Honest assessment for a pharma / field background — not a placement claim.

★ UNDERRATED • ONE OF THE 2 EASIEST ENTRIES

Clinical Research / Trials Coordinator

Running clinical evaluations and device trials end to end.

WHY YOUR PHARMA BACKGROUND COUNTS

Protocols, clinical data, GCP — this is the language your pharma background already gave you. Field experience or fresh degree, you start ahead.

ENTRY DIFFICULTY

No engineering degree

Honest assessment for a pharma / field background — not a placement claim.

★ UNDERRATED • ONE OF THE 2 EASIEST ENTRIES

Regulatory Affairs Associate

Getting devices approved and compliant — CDSCO, MDR, technical files.

WHY YOUR PHARMA BACKGROUND COUNTS

Approvals, labels, compliance — pharma logic maps straight onto devices. Years in the field or straight from your studies, you're not starting from zero.

ENTRY DIFFICULTY

No engineering degree

Honest assessment for a pharma / field background — not a placement claim.

Clinical Application Specialist

Training doctors and staff to use the device in the clinical environment.

WHY YOUR PHARMA BACKGROUND COUNTS

You understand the clinical environment and how to explain a product to doctors — half this role. The gap is device-technical depth, learnable from a field or academic start.

ENTRY DIFFICULTY

No engineering mandated • tech/clinical preferred

Honest assessment for a pharma / field background — not a placement claim.

Market Access / Health Economics

Pricing, reimbursement and the economic case for a device.

WHY YOUR PHARMA BACKGROUND COUNTS

You already grasp how price, value and access decide whether a product wins. Pharma exposure — field or academic — gives the instinct; you add the data skills.

ENTRY DIFFICULTY

No engineering degree

Honest assessment for a pharma / field background — not a placement claim.

Quality / Design Assurance Engineer

Owning product quality systems and design controls (ISO 13485, CAPA).

WHY YOUR PHARMA BACKGROUND COUNTS

Your pharma and quality knowledge gives a head start — but this track usually expects an engineering or technical degree. Be realistic before you aim here.

ENTRY DIFFICULTY

Engineering degree needed

Honest assessment for a pharma / field background — not a placement claim.

R&D / Product Development Engineer

Designing and building the device itself.

WHY YOUR PHARMA BACKGROUND COUNTS

The hardest door for any pharma background — field or fresh. An engineering degree is the real prerequisite, so go in clear-eyed.

ENTRY DIFFICULTY

Engineering degree needed

Honest assessment for a pharma / field background — not a placement claim.

THE TAKEAWAY

***5 of the 7* need zero engineering degree. And the 2 easiest were clinical research and regulatory — not sales.**
