

MEDSKILLS BRAND SYSTEM

Our LinkedIn Plan

"A quick note from Areeb for the MedSkills team. Please read once, it's short, and it'll help us all pull in the same direction."

Hi team,

I spent the last couple of hours properly studying two things: our own LinkedIn pages, and how LinkedIn actually works in 2026. It has changed a lot.

I want to share what I found in plain language, so we're all on the same page before we start posting seriously.

The good news is that the fixes are simple, and once we get them right, our reach can grow a lot without spending a rupee on ads. Let me walk you through it.

"First, the honest part: None of this is anyone's fault. What we've been posting is exactly what most companies post when they start out. We were doing our best with what we knew."

ALGORITHMIC ENVIRONMENT

How LinkedIn Works Now

"Think of LinkedIn like a shopkeeper deciding which products to put in the front window."

The Front Window

- **Initial Testing Phase:** When you post something, LinkedIn first shows it to only a small handful of people.
- **The Evaluation Loop:** Then it watches what those people do.
- **Positive Signal:** If they stop and actually read it, LinkedIn thinks this is good and shows it to many more people.
- **Negative Signal:** If they scroll past quickly, LinkedIn quietly buries it, and almost no one sees it.

THE CORE OBJECTIVE

**"So the whole game is:
Make people stop and read."**

Algorithms Measure Attention

01

Comments Matter; Likes Barely Do

One real comment is worth about 15 likes to LinkedIn. A genuine conversation in the first hour is the single best thing that can happen to a post.

"Likes barely matter anymore."

02

Reading Time is the Biggest Signal

How long people read is the number one thing LinkedIn measures. Dwell time overrides simple mouse clicks and shallow likes.

"A post someone reads for a minute beats a post they like and forget in two seconds."

What LinkedIn Quietly Hides

The algorithm is designed to penalize content that lowers user retention or feels unnatural.

Posts with a link inside them

LinkedIn wants to keep users on their platform. Outbound links in the post body result in heavily restricted organic distribution.

Posts with too many hashtags

Excessive hashtag clouds look spammy. They dilute relevance, triggering automated reach suppression filters.

Posts that feel copy-pasted or AI-written

Standard AI-generated structures, overly structured bullet lists, and corporate phrasing are heavily deprioritized in the feed.

The same post coming from two accounts

Duplicated text is treated as spam. Direct reposting or copying verbatim splits the algorithm's focus and lowers overall impact.

STATE OF PLAY

What I Found on Our Pages

"An honest audit of the Company Page, Gagan sir's profile, and Shilpi ma'am's profile."

Where We Stand Today

THE SAFE PITFALL

The "Safe" Content Trap

Our posts right now are the "safe" kind LinkedIn ignores. Lots of neat bullet points, hashtags, and lines like *"At MedSkills, we believe..."* Nothing is wrong with them—they are just the kind of content people scroll past.

DISTRIBUTION LOSS

Self-Competition

Two of our accounts have been posting almost the same thing. When the company page posts something and a personal account reposts the same words, LinkedIn treats it as a duplicate and restricts visibility for both.

UNDERUTILIZED POWER

Gagan Sir's Profile

Honestly our biggest asset. He has 20,000+ followers, which is gold. But two things are holding it back: the posts are too short, and too many hashtags are being used. Small adjustments here will yield massive gains.

One Thing We're Doing Right

"We are not making up fake results. No fake placements. No fake salary numbers. Until our first batch finishes in July and we have real stories, honesty is our proof."

"Please let's never post a number we cannot stand behind."

CHANNEL ARCHITECTURE

Three Voices, Three Different Jobs

*"The biggest fix is this: We stop posting the same thing from everywhere.
Instead, each of us plays a very different role."*

Channel Segmentation Matrix

GAGAN SIR

The Lead Face

The initial connection point. His job is centered on the vision and the broader narrative.

- Why MedTech & Why now
- Personal & professional stories
- Direct appeals to pharma pros

SHILPI MA'AM

The Co-Founder Face

The operational builder. Her job is to document the active reality of building MedSkills.

- Behind the scenes
- The student learning journey
- Documenting building process

COMPANY PAGE

The Institution

The formal organization. Its job is validation, utility, and institutional authority.

- Deep industry insights
- Career & hiring opportunities
- Honest updates & educational content

Maintaining Content Integrity

"If Shilpi ma'am's post could easily become Gagan sir's post, we change it."

This rule guarantees that we do not write generic content that could belong to anyone. It forces specificity, which drives reading time and authentic engagement.

The Rationale

When everyone has a separate, distinct voice, we cover three different perspectives of the exact same journey.

Instead of boring, repetitive copy, our audience sees a multi-dimensional startup being built in real time.

OPERATIONAL GUIDELINES

The Simple Rules We'll All Follow

"Practical execution guidelines designed to work with, rather than against, the 2026 algorithm."

Rules of Engagement (1 – 4)

01 Write like a human talking to a friend

Avoid corporate templates, marketing slogans, or dry press-release formats. Write as if talking directly to a peer.

02 No links inside the post

Never include links in the body. If someone wants details or registration info, direct them to send a DM or reply in comments.

03 Maximum 5 hashtags

Less hashtags equal better reach in 2026. Keep tags minimal and highly targeted to protect page authority.

04 Reply to every comment in the first hour

Always reply to early comments as a real human. Early comment-reply chains signals the algorithm to distribute widely.

Rules of Engagement (5 – 7)

05**Post steadily, not randomly**

Consistency builds algorithmic favor. Four highly polished posts spread evenly across the week beats random, sporadic bursts of content.

06**Never post a result we cannot prove**

Honesty is our brand's greatest edge. If we publish a stat or success metric, it must be 100% auditable. We do not compromise on this.

07**No two people post the same thing**

Keep our narrative fresh. When we share a theme, each account must tackle it from their own perspective. Never double-post text.

What Happens Next

OPERATIONAL PLAN

Now I will be building a full 30-day content plan.

- **Who posts:** Assigning precise owners.
- **What they post:** Defining the distinct topics.
- **Which day they post:** Setting a weekly cadence.
- **The specific angle:** Guarding distinct perspectives.

This note is simply so everyone understands the "why" before we begin. If anything is unclear, ask me.

"I genuinely believe that if we execute this properly and consistently for a few months, MedSkills can become the name people think of for MedTech careers in India. Let's build this honestly, publicly, and together."

— AREEB
